

Community Alert Siren System Test

The San Onofre Nuclear Generating Station (SONGS) has scheduled the annual Community Alert Siren System test for Wednesday, October 21, 2009, from 10 am to noon. All sirens located within the Emergency Planning Zone surrounding SONGS will be sounded several times for approximately three minutes each time.

In the event of an actual emergency, these sirens are a signal to turn on a radio or television and listen for pertinent information and instructions. You can also refer to the Nuclear Information section in the Orange County South customer guide white pages of your AT&T telephone directory for additional information.
